Project tasks

Tasks from "paths" and "pre-school pores" are aimed at the development of perception, spatial orientation, imagination, initiative, attention, memory, the ability to think and reason. Addition of tasks from working notebooks Gaming simulators contributes to:

The formation of graphomotor skills (preparation of the joints of the hand to further activities).

The development of the central nervous system (work with hands has a stimulating effect on the activity of the children's brain).

Overcoming difficulties in working with notebooks (some preschoolers initially hard to navigate in tasks on paper).

Improving clarity (a child can quickly correct the error and see how correctly).

Development of self-test skills and mutual tests (again due to ease in error correction).

Socially communicative development (with group work).

Artistic and aesthetic development (with simulators more space for creativity).

Tasks can be performed by groups, and individually. It is important that the child says all its actions: children today speak bad, have a modest vocabulary, and this approach develops speech.

Types of gaming simulators:

Tiko (transformable game designer for training),

Tablets of different shapes that cover covers,

Tablets with hooks to make shoelaces, ropes,

Mesh tablets,

beads

Textile balls "First Dar Rubber".

Consider some types of tasks and gaming simulators with which you can perform them.

In the world of sounds and letters.5-7 years.Educational and methodical manual for school preparation

Educational and methodological guide "The world of sounds and letters" contains game training tasks for the preparation of children 5 - 7 years to school.The manual can be used in preschool and school institutions, as well as for individual domestic activities.The Books also published books in the "Premischarian time" series: TMAndrianova, I.L.Andrianova "In the world of numbers and numbers", E.E.Katz "Literary reading", V.A.Tlyukhina "Cooking your hand to the letter and learn to write beautifully", TSLisitskaya, L.A.Novikova "Physical Development of Preschoolers", O.S.Koreleva "Learn to make your own hands."

Tasks and their variations

What follows

Tasks for establishing and repetition sequences are very much.For example, "mats" are given - cell fields, on which part of the cells are painted with different colors and contains figures.The arrows are indicated how the cell order changes.You need to add "rug".Another version of the task with the "mats": coloring the cells so that there are no identical colors in the lines and in the columns.

Additional tools: Multicolored figures Tiko;tablet with multi-colored covers;Multicolored beads;Textile balls.

What follows when turning

Bicycle is represented, on the wheels of which multicolored mugs are depicted, shapes (or, similarly, a steering wheel is represented).It is required to repeat their sequence, taking into account the rotation of the wheels.For complications, you can set the sequence of non-colors, but figures or illustrations (for example, with the time of the year).

Additional tools: Tablet with drawn bike or tablet with round parts that can be rotated, as well as covers.

The ratio of order between numbers

You need to repeat the sequence of numbers or find an error, restore the correct sequence.

Additional tools: Figures Tiko with numbers or points;Tablet and lids with numbers.

Aspect ratio

Groups of figures and images of houses, "collected" from different figures are given. Need to establish which group refers to which house. The complexity of the task is changing due to an increase in (or decreasing) the number of objects in groups, the number of houses.

Additional tools: Figures of cloth different forms.

Finding the missing part

The square is represented from which the complex figure is "carved" and variants of figures are given. It is necessary to determine which one was "cut".

Additional tools: Figures of cloth different forms.

Sound analysis words

Dana cards with images of objects. It is required to pronounce the word (object name) and define sounds in their sequences. The vowels are redistributed, solid consonants - blue, consonants soft - green.

Additional tools: Tablet and Multicolored Covers.

What else to read?

New federal list. Recommendations for teachers. Maths. Physics. Astronomy

Why to divide on zero it is impossible?

Why does minus for minus always give plus?

Features of the work teacher of mathematics in 2018/2019 academic year

Finding a place according to the scheme of the hall

Presented the hall scheme. Each vertical range is indicated by a certain color, each horizontal - figure. Dana "Tickets": images of color figures. It is necessary to correlate the images with the designations of the rows, to find the intersection and, accordingly, the necessary places.

Additional tools: Tablet and covers with multi-colored figures.

Combining Objects based on General Sign

A variety of multicolored figures and four fields for which they need to be distributed are given. Each

field has a specific condition: for example, it cannot contain triangles or should contain figures exclusively yellow.

Additional tools: tablets and covers with multi-colored figures.

Highlighting a variety of figures

Presented a field drawn by diamonds. Part of the rhombuses is painted green, of which the Christmas tree is obtained. Nearby is the same field, it is necessary to repeat the Christmas tree on it.

Additional tools: Crochet tablets through which laces can be traded, rope; Tablets with a grid.

Drawing by points

Dana fields with nearby points. Required by connecting these points, create a specific drawing (for example, a ship) or continue the pattern.

Additional tools: Crochet tablets through which laces can be traded, rope; Tablets with a grid.

Thus, thanks to game simulators, tasks from working notebooks are becoming more variable, and the teacher gets the opportunity to develop children in new directions, individualize training.
